

Petty Machine receives premier recognition

The Enterprise Group congratulates Petty Machine & Tool Inc., which was recognized by Eaton Corporation with a Premier Supplier Award.

Diversified industrial manufacturer Eaton Corporation honored 40 of its suppliers in March with the company's prestigious Premier Supplier award. This is the fifth year that Eaton has recognized a select group of its global suppliers with this award.

Among the award winners was Petty Machine & Tool Inc., who received recognition from Eaton in the CNC Machining supplier category, for the Industrial Sector of the Aerospace Group. In over 30 countries with 4,481 suppliers, only 400 suppliers worldwide were given recognition. Petty Machine & Tool Inc., was in the top 40 of these suppliers. This was the third time in five years Petty Machine & Tool Inc. has achieved this recognition.

"These suppliers consistently delivered quality products that created value for our customers," said Craig Reed, senior vice president – Supply Chain Management. "We appreciate their work in 2009, congratulate them on this well deserved recognition and look forward to working with them to identify innovative new ways to meet our customers' needs."

The award winners fall within one of two supplier categories: Direct and Indirect. Direct Materials suppliers are those which provide goods used directly in the making of products (i.e., bearings, gaskets, seals, castings) and Indirect Materials and Services suppliers provide goods used to make products or support the business (i.e., cutting fluid, maintenance repair, office supplies).

"We are committed to on-time and defect free products to our customers" said President Sandra Petty.

For over 20 years, Petty Machine & Tool, Inc. in Jackson, Michigan has been providing diverse industries with precision manufacturing. Working with titanium, aluminum, stainless and a variety of other alloys, Petty Machine & Tool, Inc provides the aerospace, automotive, and industrial industries, among others, with quality and CNC machining.
